

FORCESIGHT

PRODUCT SHEET

The ForceSIGHT product line is broadly divided into Sensor Adaptors (data feeds), base user licenses, and analytical content modules that deliver analysis in different subject areas. An agency can expect to allocate a base license subscription for each user, and then choose a selection of sensor adaptors and content that are appropriate for their needs. Please

refer to the table below for an overview of the products.

ForceSIGHT can be delivered in one of two models: subscription service or traditional on-premise deployment. We believe strongly in the advantages of subscription service for both customers and suppliers (please see our Software-as-a-Service white paper at <http://www.bishoprocksoftware.com>), but leave the ultimate choice up to our customers.

BASE		
	ForceSIGHT Analytics	Base analytics technology that provides subsecond response time while scanning through millions of records.
	ForceSIGHT Maps	Revolutionary GIS capability that is integrated with the analysis and provides satellite, crystal-clear “birds-eye views”, and 3D fly-through imagery of crime and arrests in the city. Data is summarized through intuitive heat maps and icons.
	ForceSIGHT Admin	Administration application used by administrators to set up code mapping tables, administer security, and related maintenance tasks.
	ForceSIGHT Operations Planner	Ensure that all operations and initiatives large and small follow a policy checklist and are systematically assessed for effectiveness. Based on experience and best practices from hundreds of operations.
	ForceSIGHT Internal Affairs	A case management system for IA that incorporates policy enforcement and ensures that cases are handled on a timely basis.
	ForceSIGHT Sentinel Alerts	Sentinel Alerts are set up by investigators to notify them whenever a new piece of information matching a description appears.
	ForceSIGHT Search	Search through crime reports, dispatcher logs, and other free-form text data based on keywords.

SENSOR ADAPTORS		
RMS	Standard adaptor for RMS systems. Our library of prebuilt adaptors is growing.	
CAD	Standard adaptor for CAD systems.	
Weather	Subscription feed for historical and hourly forecast weather 72 hours in advance. New modeling techniques accurately forecast precipitation and visibility conditions by hour.	
Shot Locator	Interface for shot location systems such as Shotspotter. When used in conjunction with other adaptors such as RMS and Offender GPS Locator, shots can quickly be linked to possible suspects.	
Offender GPS Locator	Interface for Offender GPS tracking systems (“ankle bracelets”). Use to track movements of probationers/parolees to determine their daily activities.	
Property GPS Locator	Interface for Property GPS Locator technologies. As citizens attach these devices to valuables such as cash register drawers, vehicles, and electronics, location data can be fed into ForceSIGHT.	
Fleet GPS Locator	Police vehicle tracking data can be integrated for force deployment analysis purposes.	
License Plate Reader	License plate reads can be mined to find patterns for vehicles that do not generate immediate hits but are appearing coincidentally near the scenes of crimes.	
Geocoding	Rooftop-level geocoding incorporates the latest in parcel-level accuracy.	
Crime Spree Detector	Patent-pending statistical clustering algorithm that groups similar crimes into “probable sprees” to assist investigators in finding links between crimes.	
Crime Forecaster	Patent-pending forecasting method that combines seasonality, trend, weather, and spatial data to forecast crime workloads across the city. Schedulers can use this to proactively place officers strategically to counter the forecast.	

ANALYTICAL CONTENT		
Crime Trends	Run your Compstat meeting entirely off the software in real-time,	

Integrated 21st Century Crimefighting

		answering any followup research questions <i>immediately</i> in the meeting. Reinforce a culture of accountability.
	Workload & Responsiveness	Analyze the true crime workload using our patent-pending Workload Index. Monitor variations in response time, call handle times, and other service metrics. Understand the workload mix variation across different beats.
	Risk Management	Early intervention flagging, investigative policy compliance, operations planning, and risk assessment.
	Traffic	Traffic analysis including most dangerous intersections by time of day and weather conditions, alignment of traffic enforcement activity vs. real public hazards
	Process	Measures process compliance, inaccurate field data entry, system usage by command staff. ForceSIGHT also tracks its own return on investment so that you can see the value for yourself.
	Research	Research community demographics, historical weather impacts on crime, and other facts about the community.

OPTIONS		The local node contains all of the server software necessary to enables on-premise deployment of the ForceSIGHT package. This is not required when the subscription service model is used.
	ForceSIGHT Public	A subset of ForceSIGHT can be published on an agency's public website to keep the public informed about crime and accountability in their community.
	ForceSIGHT Tactical Display	A rotating set of ForceSIGHT dashboards can be displayed in plasma marquee displays in command centers to keep dispatch and other personnel aware of the current tactical situation.
